

Introduction-

Moviemania is a streaming service that offers a wide variety of award-winning movies, anime, documentaries, and more on thousands of internet-connected devices. You can watch as much as you want, whenever you want without a single commercial – all for free. You just have to visit the site and just check what type of movie you want to watch.

Objective-

Movie mania's objective is to provide best service among all movie's website which are available at free of cost. User can search how many movies and web-series has released today.

Working Methodology-

- The purpose to make this project is to provide a platform where any one can check what Movie and Web-Series released today.
- As we know there are many sites available to give such type of information about movies but we will provide a quick link to check the trailer and IMDb rating also there.
- Here are Sub Section where there are lots of category where user can visit and select what movie and web series he would like to watch.
- This will reduce the time of the user because now to watch a good movie or a web series we have to search lot. And no platforms are available to tell how much movie releasing every day.

Software Specification-

- | | | |
|----------------------------------|---|----------------------------------|
| • Language Used | : | HTML, CSS, JavaScript, Bootstrap |
| • Technology Implemented | : | Front-End Technologies |
| • Development Environment | : | Visual Studio Code |
| • Web Browser | : | Chrome/ Firefox |

Hardware Requirements-

- | | | |
|---------------------------|---|-----------------|
| • Processor | : | intel i3 |
| • Operating System | : | Window 7/8/10 |
| • RAM | : | 4+GB |
| • Hard disk | : | 64GB |
| • Hardware Devices | : | Computer System |

Team contribution-

- In this project we are working as a team of 3 person (Achal Paliwal, Prashant Agrawal, Shashank Gupta).
- There are 5 Modules in this we have divided among us by choice based.
- Movie Section and header and footer section will be handled by Prashant, Home and Login section will be managed by Achal and Search and Movie detail section will be handled by Shashank.
- This will take probably one and half month to complete this project with full analysis.

Limitations of The System Proposed-

- Internet connection is required while accessing the website.
- Easy searching algorithm is used in searching the movies so if data will increase system may slow down.
- For watching the movie user will redirect to the external links so system is highly dependent to the external resources.
- As we are working in front end technologies, we do provide functionality of comment and likes over movies.

Online GIT repository-

Conclusion -

Many of us like to watch movies and web series but finding the good and secure website for the particular movie or web series is difficult and tedious task so to solve this problem of the user we are making a project which provide an online platform to the user where they can find all their favourite movies or web series in one place and can easily access them in free. The website will redirect the user to website where they can watch their favourite movies and web series.
